

Aafedt Completes Advanced Inventory and Asset Management Software Training

Scott Aafedt, Business Solutions Consultant at DFC Consultants, has completed advanced training on inventory and asset management software from Panatrack. The in-depth training covered PanatrackerGP's system architecture, extensibility, transaction training, use-cases, best-practices, project scoping, and support topics.

This was the first training of its kind by Panatrack, lending Aafedt to an elite group of 9 software partners with this knowledge and in-depth training on PanatrackerGP.

At DFC Consultants, Aafedt works extensively with businesses who need connectivity between their warehouse or floor staff and back office. By giving companies the ability to truly understand their data, inventory levels, and track assets, managers have a firm grasp on their information and can make better financial and inventory decisions.

Panatrack integrates directly with Microsoft Dynamics GP and turns GP into a true inventory and asset software system with the ability to read barcode information and translate that data into information your employees can use.

DFC Consultants is a Microsoft Gold Certified Partner offering advanced ERP software solutions for small and medium businesses across the United States.
