

# Installation and Configuration in Microsoft Dynamics GP 2013

---

**Course Duration:** 3 Days

## About This Course

The three-day Microsoft Dynamics® GP Installation and Configuration course provides the tools to help users understand technologies and techniques necessary to successfully install Microsoft Dynamics GP.

## Audience Profile

Microsoft Dynamics GP Installation and Configuration training is recommended for people who plan to install, implement, configure, consult, or support Microsoft Dynamics GP. The class is intended for administrators, implementers, developers, and consultants who need to understand the technical aspects of Microsoft Dynamics GP. The course is not intended for non-technical staff.

## At Course Completion

After completing this course, students will be able to:

- Identify requirements and prerequisites for installing Microsoft Dynamics GP
- Install Microsoft SQL Server 2012
- Install Microsoft Dynamics GP
- Use Microsoft Dynamics GP Utilities to uniquely configure an installation and perform any other required tasks for an installation
- Troubleshoot installation issues and errors
- Identify hardware and software requirements for desktop clients
- Install Microsoft Dynamics GP desktop on a client computer
- Create an Installation Package
- Understand how to install service packs and updates to Microsoft Dynamics GP
- Identify the prerequisites and requirements for the Microsoft Dynamics GP Web Client
- Understand the components and concepts of the web client
- Complete necessary system setups within the Microsoft Dynamics GP application such as home pages, passwords, users, and security
- Set up company information
- Configure, backup, and maintain SQL databases for Microsoft Dynamics GP
- Understand how to optimize performance and troubleshoot issues with Microsoft Dynamics GP
- Understand how to set up and use a process server for Microsoft Dynamics GP
- Identify the available reporting options that are available for Microsoft Dynamics GP and set up and configure them for use
