

Creating Reports with SQL Reporting Services for Microsoft Dynamics GP

Two Days – Instructor led

Introduction

This course, Using Microsoft® SQL Server® Reporting Services with Microsoft Dynamics™ GP explores report design, creation, enhancement, and deployment.

Audience

The audience for this course includes people who plan to implement, configure, consult, or support Microsoft Dynamics GP and want to modify existing reports or create their own custom reports using Microsoft SQL Server Reporting Services. The class is targeted toward application administrators, implementers, and end users of the reports who need to understand technical aspects of using Microsoft SQL Server Reporting Services together with Microsoft Dynamics GP and gain foundational knowledge of the application functionality and capabilities.

At Training Material Completion

After reviewing this training, individuals will be able to:

- ✓ List the benefits of using SQL Server Reporting Services together with Microsoft Dynamics GP.
- ✓ Install the SQL Server Reporting Services Wizard.
- ✓ List available reports, models, and data sources.
- ✓ Demonstrate how to deploy data connections and reports, and make reports available in Microsoft Dynamics GP.
- ✓ Explain the components and data regions available in SQL Server Reporting Services.
- ✓ Determine the needs for a report.
- ✓ Describe how data is stored in Microsoft Dynamics GP.
- ✓ Describe global collections that can be used on a report.
- ✓ Create and enhance a report, data source, data set, and report parameters
- ✓ Publish reports with Report Designer and view them in Report Manager.
- ✓ Describe and create a report model
- ✓ Use Report Builder to create a report.
